Instructions:

1. **Draw the output on the answer sheet.**
2. **Write the definition of the terms/concepts mentioned in the question.**

Q1)

A) Using the given Sales Data, connect the dataset from an Excel/CSV file and create the following visualizations: 1. Bar Chart for Sales by Category 2. Line Chart for Sales by Date 3. Pie Chart for Sales by Region. Add suitable chart titles and data labels. [7 Marks]

B) Using the given Sales Data and Customer Data, combine the datasets using an appropriate Join/Relationship and create a suitable visualization using the combined data. [6 Marks]

Q2)

A) Using the given Sales Data, apply sorting and filtering and create Category and Region slicers/filters. Create an interactive report. [7 Marks]

B)Create an advanced calculation using DAX/LOD Expression and display the result using a suitable visualization. [6 Marks]

Q3)

A) Perform Pivot and Unpivot operations on the given dataset. Create Total Sales and Average Sales calculations and display the results. [7 Marks]

B) Create a Drill-Through report for a selected Category or Region and display detailed information. [6 Marks]

Q4)

A) Create an interactive KPI Dashboard using the Sales Data. Include KPI Cards, Bar Chart, Line Chart, Pie Chart and Slicer. [7 Marks]

B) Create a Parameter-based visualization that allows the user to dynamically change the data view. [6 Marks]

Q5)

A) Using the given Sales Data, create: 1.Map visualization 2. Heatmap 3.Time-Series Line Chart 4. Combo Chart. Use appropriate fields and display meaningful insights. [7 Marks]

B) Create a Custom Tooltip to display additional information when the user interacts with a visualization. [6 Marks]

Q6)

A) Create a hierarchy Year → Quarter → Month and enable Drill-Down. Apply conditional formatting and add a trend line or forecast. [7 Marks]

B) Create Bookmarks/Storytelling to present important insights from the given dataset.[6 Marks]
